

U.S. Army Sustainment Command

Distribution Management Center

The DMC and its divisions perform the following functions:

- Develops sourcing solutions for identified unit equipment shortages throughout the Army Force Generation cycle
- Tracks distribution execution down to unit level
- Integrates equipment status and availability into the build of units and projects readiness availability
- Executes maintenance priorities and monitors maintenance operations related to unit readiness
- Serves as the executive agent and program manager for field maintenance Reset
- Integrates and synchronizes Service Provider maintenance capabilities to readiness requirements
- Provides prioritization guidance to Life Cycle Management Commands, Defense Logistics Agency, and Directorates of Logistics in support of units
- Provides in-transit visibility of the transportation pipeline and helps resolve delays in movement

- Provides Standard Army Retail Supply System (SARSS)-2A individual equipment, fuels, construction, and repair part supply management support to continental U.S. units
- Executes major item equipment fill and modernization
- Operates the Left Behind Equipment and Pre-Deployment Training Equipment programs for the Army, taking accountability and maintenance for equipment remaining at home station when an active duty unit deploys

The DMC has six divisions: Distribution Integration, Materiel Readiness, Supply, Mobility, Logistics Automaton and Quality Surveillance.

The Distribution Integration Division synchronizes and integrates execution of mission related tasks. Validate equipment shortages and coordinate materiel integration and distribution of approved sourcing solutions. Compile end-to-end visibility, supply, maintenance, distribution systems, and Army Force Generation processes in order to provide a current Army Force Generation logistics common operating picture.

The Materiel Readiness Division supervises and synchronizes Army Force Generation maintenance by performing analysis that recommends priority, positions readiness assets, evaluates cost analysis, and plans Directorates of Logistics workloads. Monitors and analyzes readiness data and focuses on

improving the responsiveness and efficiency of the continental U.S. maintenance infrastructure.

The Supply Division provides materiel management and customer assistance for demand supported supplies in the continental U.S. It provides sourcing solutions for unit equipment shortages throughout the Army Force Generation cycle and provides worldwide asset visibility for Class Major end items.

The Mobility Division is responsible for the tracking and movement of command interest moves of Army Materiel Command customers, and retrograde property movement from turn-in points to depot, to include high visibility property, such as small arms readiness evaluation team weapons. It is charged with identifying and mitigating friction points to ensure velocity, accountability, and visibility throughout the forward and retrograde pipeline. The Mobility Division manages and synchronizes sea, land, and air operations, assists in proper allocation of resources in supporting units in the assigned area of operations and provides outside of the continental U.S. theater clearance and order processing support.

The Logistics Automation Division performs integration, synchronization, and planning for logistics IT systems; their interfaces; and associated user tools to conduct Army-level materiel management functions within the Distribution Management Center and in support of Army Sustainment Command activities.

The Quality Surveillance Division serves as the surveillance and assistance activity for the Army Sustainment Command to assess and promote compliance to mission requirements associated with maintenance, supply, transportation, quality assurance, ammunition, contract oversight, and ISO 9001 compliance. Programs supported include Army Prepositioned Stocks, Directorates of Logistics, Left Behind Equipment, Pre-deployment Training Equipment, and Theater Provided Equipment.
