

Fact Sheet

U.S. ARMY SUSTAINMENT COMMAND

MISSION

ASC organizes, trains, and sustains a quality deployable force and integrates materiel and services to the Soldier.

Major ASC responsibilities include:

- **Materiel Management** – Serving as AMC's executing agent, ASC is the Army's Lead Materiel Integrator, providing a single materiel readiness synchronization point. Commanding a global network of Army field support brigades and battalions, logistics support teams, brigade logistics support teams, and installation Directorates of Logistics, ASC manages and executes the Army's materiel distribution and redistribution process to meet demand signals. By providing materiel readiness visibility and management, including property accountability and workloading sources of repair, ASC's Distribution Management Center is leading the way toward more effective materiel integration, in accordance with Army priorities. LMI will focus and synchronize activities across multiple headquarters to facilitate strategic decisions for operations, depot reset induction and equipment redistribution.

Materiel support to Army force generation includes managing field-level equipment reset, left-behind equipment, and pre-deployment training equipment.

- **LOGCAP** – The Logistics Civil Augmentation Program is a U.S. Army initiative to plan for and execute contracted support services for deployed forces performing DoD-directed or DoD-supported missions during global contingency operations. Contractors deliver a wide range of support services such as dining facilities, laundry, and lodging to deployed forces worldwide, freeing Soldiers for combat missions.
- **Army Prepositioned Stocks** – ASC maintains and accounts for stocks in storage worldwide, issuing them on demand. These stocks include combat equipment and supplies, and humanitarian relief stocks, at land- and sea-based positions strategically located around the globe. Sites include the continental U.S., Italy, Korea, Japan, Kuwait, Qatar and Afghanistan.
- **Directorates of Logistics** – Many of the functions and responsibilities of installation Directorates of Logistics are coming under the control of ASC, following an agreement between Army Materiel Command and Installation Management Command. This unifies the Army’s field-level maintenance and supply capabilities under a single command, thus aligning logistics support with core competencies. The move is meant to provide good or better service at the best value, through increased quality and efficiency, while standardizing performance within the Materiel Enterprise.
